## **Ongoing Surveillance: COVID-19 in Nursing Homes**

- NHSN: Weekly case surveillance, vaccine coverage, resource needs
- Daily NH Portal: case surveillance, vaccine/hospitalization/death data
- · Vaccine Breakthrough Surveillance
  - Identify any unusual patterns (trends in age or sex, the vaccines involved, underlying health conditions, or which of the SARS-CoV-2 variants made these people sick)
  - To date, no unusual patterns have been detected
- Vaccine Effectiveness Studies: CDC and partners conducting studies in various populations, locations, and settings.

### **NHSN Reminders**

### Submit weekly case data to NHSN by Wednesday at NOON.

- Enter COVID-19 vaccination rates that same day.
   Weekly HCP & Resident COVID-19 Vaccination
- Make sure to have a back-up NHSN user for when you are away!!
   How to Add a User

### **Staff Definition per NHSN**

- Staff and facility personnel include anyone working or volunteering in the facility, which includes, but not limited to contractors, temporary staff, resident care givers, shared staff, etc.
- Defined by CMS as individuals who work in the facility on a regular (weekly) basis.

### 9

### Joint Session

- · Tip of the Week
- BinaxNOW
- · Sending specimens to SPHL

# Tip of the Week

11

# Tip of the Week: Universal Eye Protection Decisions

Eye protection protects HCPs' eyes from splashes/sprays/splatter and respiratory secretions

- > Always when Transmission-Based Precautions indicated: isolation & quarantine for COVID-19
- > Universal Eye Protection recommended (for all patient encounters) when there is moderate to substantial community transmission of SARS-CoV-2
  - Perform a facility risk assessment, weigh pros and cons, consider vax rates for staff & residents
  - Are residents able to wear their mask/contain secretions? When was your last outbreak? Did you identify the source?
- Consider using for AGPs when risk of infectious droplets is elevated
  - Risk is higher when: patient is unvaccinated and/or severely immunocompromised, community/facility COVID-19 rates are high, patient unable to practice source control
  - **Risk is lower when**: residents are fully vaccinated, asymptomatic, recovered after initial diagnosis within 90 days, and vaccination coverage among "community" is high

"Community" can be floor or facility, staff and/or residents, and/or the larger town/county/state community

# Face Protection prior to COVID-19: Masks & Eye Protection (goggles/faceshield) as part of Standard Precautions

Use during procedures and patient-care activities likely to generate splashes or sprays of blood, body fluids, secretions, especially suctioning, endotracheal intubation.

During aerosol-generating procedures on patients with suspected or proven infections transmitted by respiratory aerosols: wear a fit-tested N95 or higher respirator in addition to gloves, gown and face/eye protection

<u>Prevention | Isolation Precautions | Guidelines Library | Infection Control | CDC</u>

Standard Precautions | Appendix A | Isolation Precautions | Guidelines Library | Infection Control | CDC

13

### **BinaxNOW**

- All BinaxNOW now expire 12 months after manufacture
  - Certain lot numbers of BinaxNOW have had their expiration dates extended. A memo was sent from Caroline Wadman on 5/6.
  - Please contact <u>DPH.HAIAR@CT.gov</u> if you would like the memo with lot numbers and new expiration dates
- Starting June 1, 2021, BinaxNOW will be available for pickup only.
  - Deliveries will only be available for pallet-sized orders.
  - After requesting, you will get an email with a confiramtion # and scheduled date/timeframe for pickup at the warehouse in New Britain.
  - When requesting, please order enough for ~6 months.

# LTCFs can **submit specimens for PCR confirmation of antigen testing** to the State Public Health Laboratory

### Obtain PCR confirmation when clinical picture is inconsistent with antigen results:

- Positive antigen result for asymptomatic staff and/or resident (as part of staff screening, outbreak testing, or post-exposure testing)
- Negative antigen test results for symptomatic staff and/or resident

### Why submit to SPHL?

- SPHL can provide confirmatory PCR results in <48 hours, M-F (submit early on Fridays).
- · Help CT DPH collect specimens for genomic sequencing.

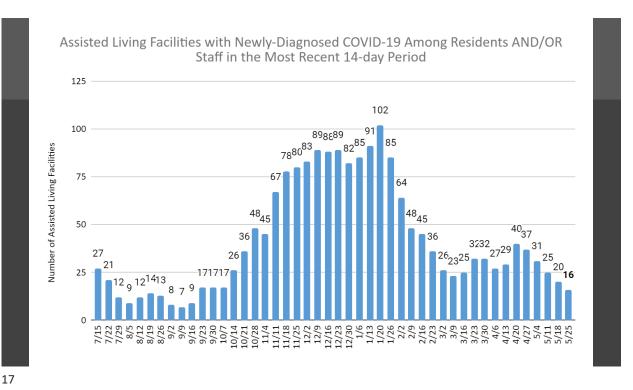

### How do I submit a confirmatory specimen to SPHL?

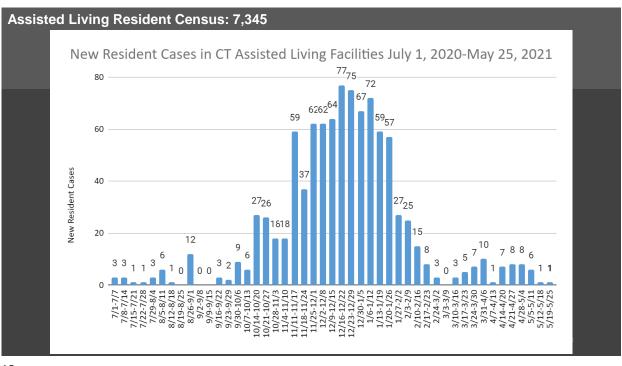

- · Label specimens correctly with patient identifying information
- A COVID-19 Clinical Test Requisition Form is required for each specimen.
- Transport specimen to state public health lab (transport COLD with ice pack)

SARS-CoV-2 Confirmatory Testing at the State Public Health Laboratory for Long Term Care Facilities

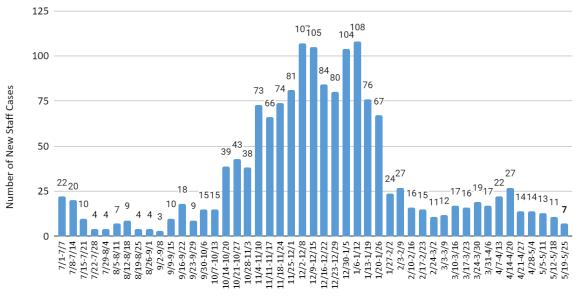

15

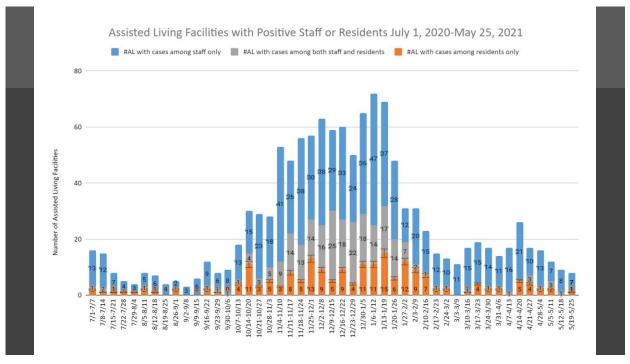

### **Assisted Living Data**

# Outbreak Testing in Assisted Living Facilities: Recommendations

- If case in memory care unit: follow NH guidance
  - Conduct outbreak testing in unit if staff member worked there while infectious or if memory care unit resident tests positive for COVID-19
  - Everyone on unit (staff & residents, regardless of vax status) should be tested every 3-7 days until no new positives for 14 days
- If case not in memory care unit
  - Identify and test anyone in close contact with the infectious person
  - Anyone with exposure in AL, regardless of vaccination status, should have 2
     COVID-19 tests: 1 immediately, & another 5-7 days after exposure

Anyone with SARS-CoV-2 infection in the last 90 days shouldn't be tested if they remain asymptomatic, including those with known contact.

21

## **Assisted Living Reporting – Set reminders!**

- LTC-MAP is no longer sending out daily email reminders
- · ALs must remember to report:
  - 1. Weekly numbers each Wednesday morning by 10am
    - · Even if zeros
    - Non-reporters will be indicated on the weekly report
  - 2. Other days IF cases were detected among staff and resident in the past 24 hours.
